The need for such methods arose in solving certain celestial mechanics problems in which one had to find the solution of a system of nonlinear differential equations describing motion over long time intervals. These problems involved the determination of the time of existence of an artificial satellite, the determination of the evolution of a satellite's orbit, the interval (Engineering--Satellite Vehicles, TT, v. 5, no. 9)

Trans. of German patent 1,068,682, by Pechiney
Compagnie de Produits Chimiques et Electrometallur-
giques, France, appl. 30 July 57, pub. 12 Nov 59,
issued 28 Apr 60 (claimed priority, France 31 July 56).

DESCRIPTORS: *Aluminum compounds, *Oxides,
Production, *Bauxite, Silicon compounds, Dioxides.

A low-shaft furnace is used for the production of
alumina from silica-rich bauxite, into which furnace
cold, oxygen-enriched air is blown, and which furnace
is used for melting a mixture consisting of 4-6 parts
bauxite, 5-8 parts coal and 2-3 parts pyrite, where
the portion of pyrite in the mixture increases as the
shaft becomes narrower.
